“Secure MS365” for SME

Our Secure MS365 offer is addressed to SME business companies using Microsoft Cloud technologies.

Secure your MS365

For SMEs using Microsoft Cloud technologies dealing with compliance constraints and security requirements and unable to fulfil them internally, "Secure MS365" is a tailor-made and adaptable, MS365 security offer.

Our team based in Luxembourg will be the interface between your IT and business entities providing advice, guidance and implementation to secure your MS365.

Control of your MS365 Cloud Infrastructure

The identification of risks and their remediations will allow you to ensure a proper use of your MS365. All the MS365 tools used by your teams will be reviewed and secured according to your priorities.

Our consultants will be able to provide you with best practices as well as train your users, allowing you to become independent and autonomous in ensuring the security of your MS365 Environment.

Your Challenges

- Lack of internal resources with required Security skills in MS365,
- Lack of time,
- Understanding of Security requirements present in the CSSF, GDPR and other regulations,
- Monitoring the evolution of compliance requirements,
- Reducing time and having all evidences to answer internal and/or external audits.

“Secure MS365” for SME

Our approach

With our 4-steps approach: « Discover » « Prepare », « Execute » and « Check » AdronH will support you in analysing your MS365 security problems, proposing an appropriate action plan and applying recommendations according to your priorities.

All these points are structured and documented in a Security Maturity Matrix "SMM". This Matrix will allow you to track the evolution of your Security compliance over time.

Our offer is based on mutual trust with our clients to make them face future audits with more confidence and serenity.

Why ADRONH ?

- AdronH is a people-centered IT company based in Luxembourg,
- A team of certified experts with extensive technological skills and a synergy between people to provide the right solution adapted to each of our clients,
- Experts in MS365 security,
- Knowledge of CSSF, GDPR and other regulations,
- User Awareness and Support: We give each of our clients keys for autonomy in IT security.

Outcomes

Secure your MS365: your mail service, remote access, collaborative services, Sharepoint, Onedrive, device management, data protection, and all other used tools will be reviewed and secured according to your priorities.

- Measurement and monitoring of your MS365 via our Security Maturity Matrix "SMM",
- A RACI describing roles and responsibilities of each stakeholder,
- Monitoring your indicators: access and authorizations of your teams, authentication and management of passwords, number of protected documents, classification of your data, use of MS licenses, etc.
- A test book describing the Use Cases to be tested at each evolution of your MS365,
- User guides and training materials for your users,
- Operational procedures for maintaining your MS365,
- Follow-up of security and compliance checks, follow-up of deficiencies, follow-up of completed vs ordered, with regular reports of activities.
